## ☰ APPLICATION PERMISSIONS

| PERMISSION                                | STATUS    | INFO   | DESCRIPTION  |
|---|-----------|--|--|
| android.permission.INTERNET               | normal    | full Internet access                         | Allows an application to create network sockets.   |
| android.permission.ACCESS_WIFI_STATE      | normal    | view Wi-Fi status                            | Allows an application to view the information about the status of Wi-Fi.   |
| android.permission.ACCESS_NETWORK_STATE   | normal    | view network status                          | Allows an application to view the status of all networks.  |
| android.permission.WRITE_EXTERNAL_STORAGE | dangerous | read/modify/delete external storage contents | Allows an application to write to external storage.  |
| android.permission.READ_PHONE_STATE       | dangerous | read phone state and identity                | Allows the application to access the phone features of the device. An application with this permission can determine the phone number and serial number of this phone, whether a call is active, the number that call is connected to and so on. |
| android.permission.READ_EXTERNAL_STORAGE  | dangerous | read external storage contents               | Allows an application to read from external storage.   |
| android.permission.READ_SMS               | dangerous | read SMS or MMS                              | Allows application to read SMS messages stored on your phone or SIM card. Malicious applications may read your confidential messages.  |
| android.permission.RECEIVE_SMS            | dangerous | receive SMS                                  | Allows application to receive and process SMS messages. Malicious applications may monitor your messages or delete them without showing them to you.   |
| android.permission.SEND_SMS               | dangerous | send SMS messages                            | Allows application to send SMS messages. Malicious applications may cost you money by sending messages without your confirmation.  |

| PERMISSION                                   | STATUS    | INFO                            | DESCRIPTION  |
|--|-----------|---------------------------------|--|
| android.permission.WRITE_SMS                 | dangerous | edit SMS or MMS                 | Allows application to write to SMS messages stored on your phone or SIM card. Malicious applications may delete your messages.   |
| android.permission.MOUNT_UNMOUNT_FILESYSTEMS | dangerous | mount and unmount file systems  | Allows the application to mount and unmount file systems for removable storage.  |
| android.permission.RECEIVE_USER_PRESENT      | unknown   | Unknown permission              | Unknown permission from android reference  |
| android.permission.GET_TASKS                 | dangerous | retrieve running applications   | Allows application to retrieve information about currently and recently running tasks. May allow malicious applications to discover private information about other applications.                                      |
| android.permission.DISABLE_KEYGUARD          | normal    |                                 | Allows applications to disable the keyguard if it is not secure.   |
| android.permission.ACCESS_COARSE_LOCATION    | dangerous | coarse (network-based) location | Access coarse location sources, such as the mobile network database, to determine an approximate phone location, where available. Malicious applications can use this to determine approximately where you are.        |
| android.permission.CALL_PHONE                | dangerous | directly call phone numbers     | Allows the application to call phone numbers without your intervention. Malicious applications may cause unexpected calls on your phone bill. Note that this does not allow the application to call emergency numbers. |

| PERMISSION   | STATUS    | INFO                                    | DESCRIPTION   |
|--|-----------|---|---|
| android.permission.ACCESS_FINE_LOCATION            | dangerous | fine (GPS) location                     | Access fine location sources, such as the Global Positioning System on the phone, where available. Malicious applications can use this to determine where you are and may consume additional battery power. |
| android.permission.ACCESS_LOCATION_EXTRA_COMMANDS  | normal    | access extra location provider commands | Access extra location provider commands. Malicious applications could use this to interfere with the operation of the GPS or other location sources.  |
| android.permission.CHANGE_WIFI_STATE               | normal    | change Wi-Fi status                     | Allows an application to connect to and disconnect from Wi-Fi access points and to make changes to configured Wi-Fi networks.   |
| com.android.launcher.permission.UNINSTALL_SHORTCUT | unknown   | Unknown permission                      | Unknown permission from android reference   |
| android.permission.WAKE_LOCK                       | normal    | prevent phone from sleeping             | Allows an application to prevent the phone from going to sleep.   |
| android.permission.VIBRATE                         | normal    | control vibrator                        | Allows the application to control the vibrator.   |
| android.permission.CHANGE_NETWORK_STATE            | normal    | change network connectivity             | Allows applications to change network connectivity state.   |
| android.permission.WRITE_SETTINGS                  | dangerous | modify global system settings           | Allows an application to modify the system's settings data. Malicious applications can corrupt your system's configuration.   |
| android.permission.SYSTEM_OVERLAY_WINDOW           | unknown   | Unknown permission                      | Unknown permission from android reference   |

| PERMISSION                                  | STATUS            | INFO                      | DESCRIPTION   |
|---|-------------------|---------------------------|---|
| android.permission.MOUNT_FORMAT_FILESYSTEMS | dangerous         | format external storage   | Allows the application to format removable storage.   |
| android.permission.CHANGE_CONFIGURATION     | SignatureOrSystem | change your UI settings   | Allows an application to change the current configuration, such as the locale or overall font size.   |
| android.permission.RUN_INSTRUMENTATION      | unknown           | Unknown permission        | Unknown permission from android reference   |
| android.permission.READ_SETTINGS            | unknown           | Unknown permission        | Unknown permission from android reference   |
| android.permission.RECEIVE_MMS              | dangerous         | receive MMS               | Allows application to receive and process MMS messages. Malicious applications may monitor your messages or delete them without showing them to you.  |
| android.permission.BROADCAST_STICKY         | normal            | send sticky broadcast     | Allows an application to send sticky broadcasts, which remain after the broadcast ends. Malicious applications can make the phone slow or unstable by causing it to use too much memory.                          |
| android.permission.GET_ACCOUNTS             | dangerous         | list accounts             | Allows access to the list of accounts in the Accounts Service.  |
| android.permission.RESTART_PACKAGES         | normal            | kill background processes | Allows an application to kill background processes of other applications, even if memory is not low.  |
| android.permission.READ_LOGS                | dangerous         | read sensitive log data   | Allows an application to read from the system's various log files. This allows it to discover general information about what you are doing with the phone, potentially including personal or private information. |

| PERMISSION                          | STATUS    | INFO        | DESCRIPTION  |
|-------------------------------------|-----------|-------------|--|
| android.permission.RECEIVE_WAP_PUSH | dangerous | receive WAP | Allows application to receive and process WAP messages. Malicious applications may monitor your messages or delete them without showing them to you. |

## NETWORK SECURITY

| NO | SCOPE | SEVERITY | DESCRIPTION |
|----|-------|----------|-------------|
|    |       |          |             |

# CERTIFICATE ANALYSIS

HIGH: 1 | WARNING: 0 | INFO: 1

| TITLE   | SEVERITY | DESCRIPTION   |
|---|----------|---|
| Signed Application                            | info     | Application is signed with a code signing certificate   |
| Application vulnerable to Janus Vulnerability | high     | Application is signed with v1 signature scheme, making it vulnerable to Janus vulnerability on Android 5.0-8.0, if signed only with v1 signature scheme. Applications running on Android 5.0-7.0 signed with v1, and v2/v3 scheme is also vulnerable. |

# MANIFEST ANALYSIS

HIGH: 1 | WARNING: 11 | INFO: 0 | SUPPRESSED: 0

| NO | ISSUE  | SEVERITY | DESCRIPTION   |
|----|--|----------|---|
| 1  | App can be installed on a vulnerable Android version [minSdk=9]          | warning  | This application can be installed on an older version of android that has multiple unfixed vulnerabilities. Support an Android version > 8, API 26 to receive reasonable security updates.  |
| 2  | Debug Enabled For App [android:debuggable=true]                          | high     | Debugging was enabled on the app which makes it easier for reverse engineers to hook a debugger to it. This allows dumping a stack trace and accessing debugging helper classes.  |
| 3  | Application Data can be Backed up [android:allowBackup] flag is missing. | warning  | The flag [android:allowBackup] should be set to false. By default it is set to true and allows anyone to backup your application data via adb. It allows users who have enabled USB debugging to copy application data off of the device. |

| NO | ISSUE   | SEVERITY | DESCRIPTION   |
|----|---|----------|---|
| 4  | Broadcast Receiver<br>(com.y.f.jar.pay.InNoticeReceiver) is not Protected.<br>An intent-filter exists.  | warning  | A Broadcast Receiver is found to be shared with other apps on the device therefore leaving it accessible to any other application on the device. The presence of intent-filter indicates that the Broadcast Receiver is explicitly exported.  |
| 5  | Broadcast Receiver (com.mn.kt.rs.RsRe) is not Protected.<br>An intent-filter exists.  | warning  | A Broadcast Receiver is found to be shared with other apps on the device therefore leaving it accessible to any other application on the device. The presence of intent-filter indicates that the Broadcast Receiver is explicitly exported.  |
| 6  | Service (com.mn.kt.rs.RsSe) is not Protected.<br>An intent-filter exists.   | warning  | A Service is found to be shared with other apps on the device therefore leaving it accessible to any other application on the device. The presence of intent-filter indicates that the Service is explicitly exported.  |
| 7  | Broadcast Receiver<br>(com.comment.one.receiver.EBooReceiver)<br>is not Protected.<br>An intent-filter exists.  | warning  | A Broadcast Receiver is found to be shared with other apps on the device therefore leaving it accessible to any other application on the device. The presence of intent-filter indicates that the Broadcast Receiver is explicitly exported.  |
| 8  | Service<br>(com.yuanlang.pay.JobScheduleService) is Protected by a permission, but the protection level of the permission should be checked.<br><br>Permission:<br>android.permission.BIND_JOB_SERVICE<br>[android:exported=true] | warning  | A Service is found to be shared with other apps on the device therefore leaving it accessible to any other application on the device. It is protected by a permission which is not defined in the analysed application. As a result, the protection level of the permission should be checked where it is defined. If it is set to normal or dangerous, a malicious application can request and obtain the permission and interact with the component. If it is set to signature, only applications signed with the same certificate can obtain the permission. |
| 9  | High Intent Priority (2147483647)<br>[android:priority]   | warning  | By setting an intent priority higher than another intent, the app effectively overrides other requests.   |
| 10 | High Intent Priority (2147483647)<br>[android:priority]   | warning  | By setting an intent priority higher than another intent, the app effectively overrides other requests.   |

| NO | ISSUE   | SEVERITY | DESCRIPTION   |
|----|---|----------|---|
| 11 | High Intent Priority (2147483647)<br>[android:priority] | warning  | By setting an intent priority higher than another intent, the app effectively overrides other requests. |
| 12 | High Intent Priority (2147483647)<br>[android:priority] | warning  | By setting an intent priority higher than another intent, the app effectively overrides other requests. |

|----|-----------------|----------------------------------|--|---|
| 1  | FCS_RBG_EXT.1.1 | Security Functional Requirements | Random Bit Generation Services           | The application invoke platform-provided DRBG functionality for its cryptographic operations.                           |
| 2  | FCS_STO_EXT.1.1 | Security Functional Requirements | Storage of Credentials                   | The application does not store any credentials to non-volatile memory.  |
| 3  | FCS_CKM_EXT.1.1 | Security Functional Requirements | Cryptographic Key Generation Services    | The application generate no asymmetric cryptographic keys.  |
| 4  | FDP_DEC_EXT.1.1 | Security Functional Requirements | Access to Platform Resources             | The application has access to ['network connectivity', 'location'].   |
| 5  | FDP_DEC_EXT.1.2 | Security Functional Requirements | Access to Platform Resources             | The application has access to ['system logs'].  |
| 6  | FDP_NET_EXT.1.1 | Security Functional Requirements | Network Communications                   | The application has user/application initiated network communications.  |
| 7  | FDP_DAR_EXT.1.1 | Security Functional Requirements | Encryption Of Sensitive Application Data | The application implement functionality to encrypt sensitive data in non-volatile memory.                               |
| 8  | FMT_MEC_EXT.1.1 | Security Functional Requirements | Supported Configuration Mechanism        | The application invoke the mechanisms recommended by the platform vendor for storing and setting configuration options. |
| 9  | FTP_DIT_EXT.1.1 | Security Functional Requirements | Protection of Data in Transit            | The application does encrypt some transmitted data with HTTPS/TLS/SSH between itself and another trusted IT product.    |

| NO | IDENTIFIER                      | REQUIREMENT                                      | FEATURE   | DESCRIPTION   |
|----|---------------------------------|--|---|---|
| 10 | FCS_RBG_EXT.2.1,FCS_RBG_EXT.2.2 | Selection-Based Security Functional Requirements | Random Bit Generation from Application          | The application perform all deterministic random bit generation (DRBG) services in accordance with NIST Special Publication 800-90A using Hash_DRBG. The deterministic RBG is seeded by an entropy source that accumulates entropy from a platform-based DRBG and a software-based noise source, with a minimum of 256 bits of entropy at least equal to the greatest security strength (according to NIST SP 800-57) of the keys and hashes that it will generate. |
| 11 | FCS_COP.1.1(1)                  | Selection-Based Security Functional Requirements | Cryptographic Operation - Encryption/Decryption | The application perform encryption/decryption not in accordance with FCS_COP.1.1(1), AES-ECB mode is being used.  |
| 12 | FCS_COP.1.1(2)                  | Selection-Based Security Functional Requirements | Cryptographic Operation - Hashing               | The application perform cryptographic hashing services not in accordance with FCS_COP.1.1(2) and uses the cryptographic algorithm RC2/RC4/MD4/MD5.  |
| 13 | FCS_COP.1.1(3)                  | Selection-Based Security Functional Requirements | Cryptographic Operation - Signing               | The application perform cryptographic signature services (generation and verification) in accordance with a specified cryptographic algorithm RSA schemes using cryptographic key sizes of 2048-bit or greater.   |
| 14 | FCS_HTTPS_EXT.1.1               | Selection-Based Security Functional Requirements | HTTPS Protocol                                  | The application implement the HTTPS protocol that complies with RFC 2818.   |
| 15 | FCS_HTTPS_EXT.1.2               | Selection-Based Security Functional Requirements | HTTPS Protocol                                  | The application implement HTTPS using TLS.  |
| 16 | FCS_HTTPS_EXT.1.3               | Selection-Based Security Functional Requirements | HTTPS Protocol                                  | The application notify the user and not establish the connection or request application authorization to establish the connection if the peer certificate is deemed invalid.  |

| NO | IDENTIFIER       | REQUIREMENT                                      | FEATURE                                | DESCRIPTION   |
|----|------------------|--|--|---|
| 17 | FIA_X509_EXT.1.1 | Selection-Based Security Functional Requirements | X.509 Certificate Validation           | The application invoked platform-provided functionality to validate certificates in accordance with the following rules: ['The certificate path must terminate with a trusted CA certificate']. |
| 18 | FIA_X509_EXT.2.1 | Selection-Based Security Functional Requirements | X.509 Certificate Authentication       | The application use X.509v3 certificates as defined by RFC 5280 to support authentication for HTTPS , TLS.  |
| 19 | FCS_CKM.1.1(2)   | Optional Security Functional Requirements        | Cryptographic Symmetric Key Generation | The application shall generate symmetric cryptographic keys using a Random Bit Generator as specified in FCS_RBG_EXT.1 and specified cryptographic key sizes 128 bit or 256 bit.                |
